

ROUND 21 · THE ROUND BEFORE

workspace_bash

r21

agent

The forward lowercases NORM_TYPE (``lns``) but the branch checks `norm\_type == 'LNS'` – a case mismatch that would make the LNS branch dead code and crash with `use\_cache=True`.

call

```
$ ... diff /repro/reference/.../modeling_llama.py peft_pretraining/modeling_llama.py && ...
... grep -n "NORM_TYPE\|norm_type" peft_pretraining/modeling_llama.py | head -40
```

result

```
...
427c427
<         elif norm_type == 'cod':
---
>         elif norm_type == 'LNS':
...
403:         norm_type = os.getenv('NORM_TYPE', 'pre').lower()
```

ROUND 22 · DECISIVE

workspace_bash

decisive

r22

agent

... So running `bash run\_130m.sh LNS 3` on the released repo would NOT actually apply LNS. This is a genuine bug in the released code.

call

```
$ ... cp /repro/reference/supplement/.../modeling_llama.py /tmp/modeling_ref.py &&
... NORM_TYPE=cod POST_NUM=3 .venv/bin/python -c "... print('REFERENCE cod version ...
```

result

```
...
cannot allocate memory for thread-local data: ABORT
...
```
